

Braco White Mustard

Braco white mustard is a brassica cover crop that can be used to suppress weeds and nematodes in any warm-season window in the rotation. When turned into the soil at flowering, it is an effective biofumigant. Its deep tap root breaks up soil, builds organic matter, and scavenges available nutrients. If plowed down, the nutrient rich green material will recycle nitrogen for the following crop.

Flowers attract beneficial insects. If fall planted, white mustard winter kills and provides a dead mulch, which fits nicely in rotations where an early spring crop is planted. Good break crop in small grain-intensive rotations.

Allow 60-70 days of growth before cutting. Flail mow or chop to reduce particle size. Plant material can be incorporated into the soil 5-6 inches deep with a disc.

At A Glance

- Brassica cover crop
- Rapid growth and weed suppression
- “Break crop” and pest suppresser/bio-fumigator
- Increases soil tilth with deep tap roots
- Blooms attract beneficial insects

Best Uses

Warm season cover crop and break crop

Establishment

Seeding Rate: 8-10 lbs/A. For maximum biomass for a summer smother crop or to till in as a biofumigant, 15-20 lbs/A

Seeding Depth: 1/4”-1/2”

Seeding Dates: Early spring, summer or early fall; mid-September if needed as a winter-killed mulch.
