

GreenFast

Seeding Rate: 30-40lb/A

38% Festulolium

27% Orchardgrass

22% Premium Perennial Ryegrass

9% Medium Red Clover

4% White Clover

A fast starting mix that is of very high quality. This mix can be used for wet hay and/or managed grazing. The main component, festulolium, is very fast starting, high yielding and of excellent forage quality. Plant this mix and expect performance. Can be used to thicken weak alfalfa stand and thin pastures.

Soil Adaptation:

Adapted to moist to good soils north of the Mason-Dixon line.

Likes high fertility.

Wet— Orchardgrass component does not like wet soils

Drought—Acceptable.

pH range: 6.0 and higher.

Cutting Management:

Cut leaving a 3-4" stubble height. Wide swath management recommended to quickly harvest the forage as regrowth is rapid

Grazing Management:

Turn livestock in when 8-10" of growth and remove when 3-4".

Have paddocks designed to get all livestock on and off within a max of 2 days. Because of rapid growth, we recommend machine harvest once or twice a year to reduce manure load.

Stand life:

Approximately 3-4 years in most situations. Festulolium components will typically be very productive for 3 years. Longer lived species if established will usually fill in as festulolium fades. In many locations south of PA, expect shorter life of festulolium.

Traffic Tolerance:

All species have good traffic tolerance.

INGREDIENTS

At A Glance

Uses:

Dry Hay: Poor

Haylage/Balage: Excellent

Intensive Grazing: very good

Continuous Grazing: good for renovating thin pastures

Establishment:

Seeding Rate:

straight: 30-40 lb/acre.

Depth: 1/8-3/8 inch

Speed: Fast. The orchardgrass and meadow fescue start a little slow
