Seeding Rate: 20-30lb/A

60% TallFescue

25% Orchardgrass

15% Premium Timothy

An all-grass mix that will give both high quality forage plus yield across many soils. Can be seeded alone or with the legumes of your choice. Use the large box for the grasses and the small box for the legumes.

Soil Adaptation:

Tolerates wetter soils well but also performs very well on good to drier soils.

Wet- Good but will not tolerate excessive standing water.

Drought—Very Good. The timothy will not do well under a drought, but tall fescue and orchardgrass will persist.

pH range: 6.0 and higher. Tall fescue will tolerate lower pH's

Cutting Management:

Cut leaving a 3 to 4 inch stubble height. Ideally should be cut before grass heads. Timothy is tolerant to early cuttings.

Stand life:

Tall fescue and timothy's persistence is very long except for in southern climates. Stand should persist well for at least 3 years.

Traffic Tolerance:

Very Good. Tall fescue has superior traffic tolerance.
