

Rivendel

Trifolium repens L.

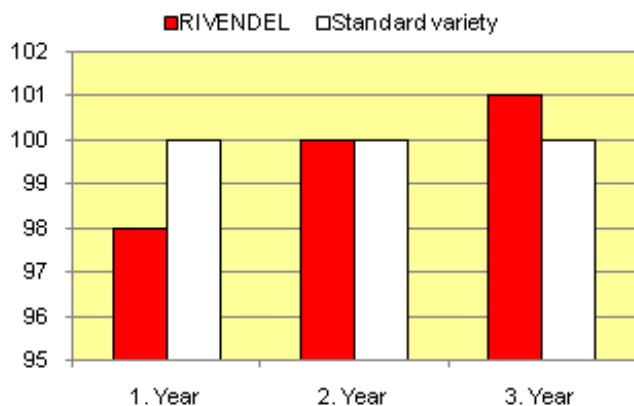

White Clover

RIVENDEL is a Small-Leaved Grazing Type

- Small-leaved
- Grazing type
- Perfect for permanent pastures
- Highly disease resistant

Results from off. trials in Denmark showing the drymatter yield

100=98 dt/ha in 1st year, 100 in 2nd year and 101 in 3rd year

Variety Type

Trials show that small leaved white clover is most persistent in permanent pastures under a grazing management. RIVENDEL is a small-leaved very persistent variety. It has short rhizomes and short leaf growth, which makes it suitable for both cattle and sheep farming as it tolerates close grazing and maintains a high proportion of clover in the sward.

Winterhardiness

In several trials throughout Europe, RIVENDEL has shown its excellent resistance against strong and cold winter conditions.

Yield

RIVENDEL has a good distribution of DM yields throughout the season and years with high relative yields compared to the standard variety in 3rd and following years.

Disease Resistance

RIVENDEL has a good resistance to nematodes and clover rot (Sclerotinia), which also improves the persistence.

Sclerotinia average all cuts

MILKA VRS mid-leaved 2,5

VRS 2 middle/big-leaved 1,8

Control variety small-leaved 2,8

RIVENDEL small-leaved 1,5
