

Kentaur Perennial Ryegrass

Kentaur is an ideal perennial ryegrass for mechanical harvest, conservation, or grazing. It provides very high dry matter yield. It provides the top level quality characteristic of tetraploids, including high sugar content, making for easy ensilage. It also has better quality of subsequent cuts compared to diploids.

Kentaur maintains season-long health and cold tolerance, from spring when leaf spot may be present, through fall when crown rust often appears. Kentaur stays healthy, keeping forage quality high. It shows good tolerance to cold during winter, but also to cold snaps after it breaks dormancy again in the spring—again minimizing the risk of damage to forage quality.

At A Glance

- Intermediate maturity tetraploid
- Good choice for conservation
- Resistance to two main diseases
- Early start in spring
- Cold tolerant
- Excellent performance in both north and south

Establishment

Seeding Rate: 40-50 lbs/A

Seeding Depth: 1/4"

Seeding Dates: Early spring or late summer
