Lipalma Tall Fescue

Lipalma is an improved European soft-leaf tall fescue. It has a dense stand and excellent rust resistance, with good yield distribution over all cuttings. It is well suited for extensive use and dry areas.

**Fertility:** Commercial fertilizer or manure at a rate of 50# N/A at planting time and approximately every other grazing. If machine harvesting, 50# N/A should be applied at green-up and after each cutting. Finally, follow soil test recommendations.

**Grazing and Harvest Tips:**
Rotational grazing is preferred and will increase yields and animal performance, as well as ensure stand longevity. Graze at approximately 10-12 inches and remove animals at 3-4 inches. When grazing Lipalma, reduce grain levels and consider adding more fiber to the ration.

**Establishment**
Use the large box of the drill

**Seeding Rate:** 35-45 lbs/A
With new alfalfa seeding: 2-5 lbs/A

**Seeding Depth:** 1/4” - 1/2”

**Establishment:** Rapid
